

Coaxial Spot Light

SLDH-A21UV-□

We prepare wavelength of 365,375,405.

There is no need to have the expensive UV lens and camera because visible light camera have sensitivity in the 405nm peak wavelength.

It is the best confirmation of the application state of the adhesive using the excitation of the phosphor and difficult fine scratch test, the foreign matter such as dust confirmation in the visible light.
